

Why Not Build a Home This Year

And let 1912 mark the beginning of your fortune and a new life! Nothing on earth gives a family standing in a community like the ownership of a nice, comfortable home. The winter is a good time to perfect all the little details and we've a good warm office, with experience in planning homes, also lots of time at your disposal to help you get up a suitable plan and talk over the lumber you will need. Come in and let's figure it out together, and see the various kinds of lumber that go into a building

ABOUT POTATOES

HOW TO MAKE THEM A MORE PROFITABLE CROP.

Northern Ohio, Indiana and Michigan raise 240 bushels of potatoes per acre. Massachusetts raises 225 bushels per acre. Kentucky raises 80 bushels per acre. Jefferson county raises 151 bushels per acre—first crop. Shelby county raises 107 bushels per acre.

There is a reason: Ohio, Indiana and Michigan are very liberal users of fertilizers on potatoes, using from 800 to 1500 pounds per annum per acre. Jefferson county uses 500 pounds per acre on first crop, and frequently makes a second application and produces a second crop.

If the average Shelby county farmer would induce his tenant to raise two or three acres of potatoes, this crop will not interfere with the tobacco crop. Sell it in July or August and the tenant will have enough ready money to carry him until his tobacco is ready for market. The average price in July and August for four years past has been 84c per bushel. For every 100 pounds of good potato fertilizer used up to 1,000 pounds per acre he will get an increase of 10 bushels of potatoes per acre. Let us see how this works:

One acre of potatoes, not fertilized, averages for years 107 bushels, at 84c per bushel, July and August... \$ 89.88
One acre fertilized, 1,000 lbs. per acre, 207 bu. at 84c... 173.88
1,000 lbs. potato fertilizer at \$1.75 per cwt... 17.50
One acre fertilized, less cost of fertilizer... \$106.38
One acre fertilized... \$ 89.88
Net profit on investment of... \$ 116.50

Furthermore, all things being equal, all of the potatoes will be merchantable and the same bulk of potatoes will weigh nearly 10 per cent. more in July and August than in October from the same crop. In every cross-roads grocery in Kentucky you will find Northern potatoes for sale, and while the bulk of first crop of potatoes, raised in Kentucky for market, are shipped East to get the better price before Northern potatoes mature. Kentucky should raise enough second crop to supply her during the remainder of the year, and two crops can be produced with one application of fertilizer.—Shelby Record.

Does Well.

A bushel of wheat does well to multiply itself by twenty when used in planting. A bushel of corn will multiply itself 300 times or more. Good seed corn this year is cheap at any price.

Treat Seed Oats for Smut.

During the last three or four years nothing new has been developed in the way of improving upon the formalin method of treating seed oats for smut. This is undoubtedly the easiest and simplest. Secure one pound of commercial formalin at any drug store and dissolve in fifty gallons of water. Spread your seed out on the barn floor. With a sprinkling can distribute this solution, using about one gallon for every bushel of grain. Shovel the oats over until thoroughly wet and leave the grain in a pile for two or three hours, then spread out thin so it will dry. After the moisture has evaporated, the grain can be sacked and held until needed for use.

The process is so simple and so easily applied that every bushel of small grain whether it be oats, spring wheat, barley, etc., should be treated even though the farmer is pretty well convinced that smut spores are not present in his own seed. It does not require much smutted seed to result in a loss of 5 per cent to 10 per cent of the crop. Anyone can figure for himself what this really means.

Be sure that the formalin is up to full strength. Formalin is a 40 per cent solution of formaldehyde, which rapidly loses its strength if it is not kept in tightly corked bottles. Dishonest dealers also dilute with water so that the effectiveness of the formalin treatment is often seriously impaired. Secure your formalin from a source which, to your mind, is a guarantee of its full strength. Then it will be possible to absolutely prevent the presence of smutted grain at harvest time.

Hens Make Money.

Mrs. Katie Kelley, one of North Leitchfield's successful chicken fanciers, returned during the twenty-nine days of February from 90 hens, 1,292 eggs, which brought the sum of \$27.20. Mrs. Kelley wants to know who can beat it. While this is only an average of fifteen eggs a month per hen, it shows that the value of a hen as a wealth producer is not to be despised.—Leitchfield Gazette.

He Didn't Hear Nothing.

A tall man from the timbered regions, suspected of hailing from another county, stepped into a Richmond store the other day to do some trading. Among the desired purchases was a shirtwaist for his wife. Entering the store he was directed to the shirtwaist department, and made his wants known to the young lady who was in charge. "What bust?" asked the young lady. The man looked at her inquiringly a moment and then said: "I dunno; I didn't hear nothing."
